Franklin Electric

6CT MOTORS WITH SCREW KIT

MORE CONVENIENCE. LESS EFFORT. FASTER INSTALLATION.

Matching screw kit now included with all 6″ encapsulated submersible motors

For us, continuous improvement means not only enhancing our products but also optimizing installation and commissioning processes. Our goal is to simplify procedures, reduce additional effort, and ensure smooth operations on site.

That is why all 6″ encapsulated submersible motors will now be supplied with the matching srew kit required for submersible pump installation.

A small addition that makes a big difference in practice: All necessary components are readily available, eliminating the need for separate procurement and allowing installation to proceed without unnecessary delays.

Franklin Electric Submersible motors & Accessories

Your Benefits at a Glance:

- ✅ **Everything from a single source – Motor and required mounting hardware**
- ✅ **Easier and faster assembly**
- ✅ **Smooth installation No additional procurement required**
- ✅ **Fewer delays on site**

Implementation of this change will begin in January 2027 and will be introduced gradually as part of the ongoing product transition.
