DrivE-Tech Frequency drive Improved Redesign of frame size 1

Franklin Electric offers an improved design of the DrivE-Tech frequency drive in frame size 1:

- ✓ The new DrivE-Tech frame size 1 model has a more compact design.
- ✓ The ingress protection class of the enclosure design has been improved and now corresponds to IP66 and is now protected against dust and strong water jets.
- ✓ The previous LCD display has been replaced by a high-resolution and bright OLED screen.
- ✓ Simplified and compact installation of the frequency drive thanks to redesigned wall and motor mounting kits. These are suitable for both 230V and 400V models up to 4.0 kW.
